

## **BanHelper helps e107.org**

nlstart,

For the admins on e107.org the BanHelper plugin is their helping hand to fight spammers. This means the admins do not have to manually delete posts, remove comments, delete the user signature, change the user password and put the user in the banlist by hand. They just use the BanHelper and it automates all these task that previously needed to be done with a lot of patience.

The BanHelper plugin has been created exactly for that single purpose: enable admins to focus on administrating their website, not spending all their time fighting spam.
