

ShowMyIP v1.1

nlstart,

Some bugfixes have been done upon the ShowMyIP plugin.

On some web servers (not being Linux or Unix) this could result in a code dump or into the fact that the IP address always ended up as 'Unknown'.

The following fixes have been applied in ShowMyIP version 1.1:

- » showmyip: added correct full php tag in top of file instead of shorttag
- » PHP function getenv() doesn't work when Server API is ASAPI (IIS); the IP number is than always unknown
fixed by using function `$_SERVER["REMOTE_ADDR"]` for those situations.
- » variables ip and full where set improperly
