

## Locator with embedded Google Maps

nlstart,

Release Candidate 2 of Locator has been published. This new version makes it possible to have a Google Map embedded on top of your Locator page.

A Google Maps API key is required for displaying the embedded Google Map. You can [download a free Google Maps API key](#).

The following settings of the embedded map can be self defined by using the admin configuration:

Show Map control (zoom/move/center) ; on/off

Map control type ; large/small

Show Map type choice (map/satellite/hybrid) ; on/off

Map type default ; map/satellite/hybrid

Map scale control ; on/off

Map width (in pixels, default: 500) ; any desired pixel size

Map height (in pixels, default: 500) ; any desired pixel size

Map side bar ; on/off

Show info window on click on location ; on/off

Show map directions inside info window ; on/off
