

## **BanHelper v1.0**

nlstart,

I have just released the BanHelper v1.0 plugin.

With this plugin you should be able to fight your spammers relatively easy.

This plugin is a collection of anti spam tools, partly based on the Comment Stop Beta 0.6 plugin of Jezza. This plugin is aimed at stopping the type of spam that most sites will suffer from, but it may not suit everyone's needs.

This plugin deletes database content (forum threads, comments) when you ask for it. Please make regular backups, and create a backup before use. Use at own risk! Test offline first.

As a consequence of the direct deletion, it may mess up your forum counts! You are advised if you use Ban Helper regularly, to run a manual recount regularly as well.

Download it from one of these locations:
